Subject: Microsoft Settlement

I believe the proposed settlement is wrong. It does nothing to limit Microsoft in the future.

Microsoft must done the following:

- 1) Make Windows OpenSource
- 2) No longer include programs such as Explorer as part of the base distribution of windows.
- 3) If microsoft must include Explorer, then includer competing programs.
- 4) Microsoft must make Office available to any OS with a large distrubtion including Linux. Released versions of Office must be the same for every OS.
